

GETTING THE COLOR THAT YOU WANT

After a log is cut, it goes through a bleaching process and then, if desired, dyed in a similar manner. This allows for more control in the coloring process and less need for staining during finishing. Bleaching and dyeing materials gives us the ability to continue to duplicate that color for ongoing large projects requiring consistency.

BLEACHED / DYED VENEER SPECIES

- QTD FIG PLATINUM DYED ANEGRE
- QTD GLACIER GREY KOTO
