

DID YOU KNOW?

We offer **Reconstituted Veneer** species. You depend on Dooge Veneer to provide you with outstanding veneer but we can also provide you with an alternative option. With the ever-changing market and trends in design, we understand veneer might not always be best for your application. Let's quote your next project.

RECONSTITUTED VENEER SPECIES

Reconstituted Veneer is rotary cut veneers from fast-growing secondary species, then dyed, layered, laminated, and laid up with grain that replicates a natural species.

It offers outstanding consistency in color and grain, making it an ideal choice for large-scale architectural projects.

Because it's man-made, flitches are available in standard sizes that simplify planning and maximize yield.

PLEASE NOTE:

Photo images of each specie are just that, images. Actual veneers in inventory may vary depending on availability.

We have your best interests in mind
with every veneer we find.
